DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-24 are rejected under 35 U.S.C. 102(b) as being unpatentable by Baisley et al (US Patent no. 6,415,299).

Regarding claims 1, 9 and 17, Baisley discloses a computer-implemented method to facilitate merging different versions of a database object, comprising receiving metadata associated with a first version of the database object and a second version of the database object; comparing metadata associated with the first version of the database object with metadata associated with the second version of the database object to create a difference report; and creating an action plan from the difference report that specifies how to merge metadata associated with the first version of the database object with metadata associated with the second version of the database object (col. 2, lines 10-27).

Regarding claims 2, 10 and 18, Baisley discloses a computer-implemented method to facilitate merging different versions of a database object, wherein metadata associated with the first version and the second version of the database object are represented in Unified Modeling Language (col. 3, lines 64-67; col. 4, lines 1-6).

Regarding claims 3, 4, 11, 12, 19 and 20, Baisley discloses in figure 3 a computer-implemented method to facilitate merging different versions of a database object, wherein comparing metadata associated with the first version and second version of the database object involves customizing which associations to compare (col. 5, table I); and customizing how to compare the first metadata and the second metadata (col. 6, table II).

Regarding claims 5, 6, 13, 15, 21 and 22, Baisley discloses in figures 5A-5D a computer-implemented method to facilitate merging different versions of a database object, wherein creating the action plan from the difference report involves allowing a user to select which actions to take in merging metadata in order to produce merged metadata with desired properties and attributes; and involves examining the difference report to determine what actions to take in bringing metadata associated with the first version and second versions of the database object into agreement.

Regarding claims 7, 15 and 23, Baisley discloses a computer-implemented method to facilitate merging different versions of a database object, wherein metadata associated with first and second versions of the metadata object can define database objects, wherein database objects include tables, columns, dimensions, cube, views, materialized views, and external tables (col. 2, lines 66-67; col. 3, lines 1-19).

Regarding claims 8, 16 and 24, Baisley discloses a computer-implemented method to facilitate merging different versions of a database object, wherein the action plan can specify a number of actions including creating, updating, and deleting database objects, and their properties (col. 4, lines 32-34).

Pertinent Prior Art

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Prior art of record to Michel K. Bowman-Amuah (US Patent no. 6,256,773) discloses a system, method and article of manufacture for configuration management in a development architecture framework.

Prior art of record to Midgley et al (US Patent no. 6,460,055) discloses a systems and methods for backing up data files.

Prior art of record to Kristen J. Webb (US Patent no. 6,675,177) discloses a method and system for backing up digital data.

Prior art of record to Midgley et al (US Patent no. 6,704,755) discloses a systems and methods for backing up data files.

Prior art of record to Gindele et al (US Patent no. 6,785,421) discloses analyzing images to determine if one or more set of materials correspond to the analyzed images.
